

INTRODUCING THE ALL-NEW

CROSSTRAK

HYBRID CAMPER

The Jayco CrossTrak hybrid camper is our latest and first ever purpose-built off-road hybrid product.

The Jayco CrossTrak is compact and lightweight, boasting a 450kg payload with a low 1,150kg TARE weight. The reduction in weight comes down to our market-leading hot-dipped galvanised Endurance 2.0 chassis (as seen on Silverline) and the JTECH 2.0 Independent trailing arm suspension.

With any off-road product, strong construction design is paramount to ensure it can withstand the undulations of driving off the beaten track. CrossTrak is built with Jayco's Tough Frame, hail and dent resistant fibreglass body, dust-resistant cabin, aluminium framed furniture and mounting.

Outdoor living is at the heart of the CrossTrak, with the outdoor kitchen featuring a 2-burner gas cooktop, stainless steel sink, overhead storage, towel rail and plenty of bench-space. Along side the concealable kitchen is a 720litre boot with a slide out 55litre portable 12V fridge. The rear hatch opens upwards to reveal the outdoor ensuite, complete with drop-down privacy tent and shower, with the space for a portable toilet.
